SUMMARY

Data Analyst with nearly 2 years of experience in data analysis, reporting, process automation, data validation, and business problem-solving. Experienced with Python, SQL, R, Power BI, Tableau, Excel, and R Shiny, working with large datasets to identify trends, investigate discrepancies, improve recurring processes, and support business reporting. Strong experience in analytical problem-solving, dashboard development, data quality, reconciliation, UAT, issue investigation, and collaborating with business and technical teams to deliver practical solutions.

TECHNICAL SKILLS

Programming: Python, SQL, R
Data Analytics: Data Analysis, EDA, Data Profiling, Data Cleaning, Data Transformation, Data Validation, Data Quality, Reconciliation, Root Cause Analysis, Impact Analysis, Trend Analysis, Statistical Analysis, Customer Segmentation
BI & Visualization: Power BI, Tableau, R Shiny, Excel, PowerPoint, Reporting Dashboards, Data Visualization
Data & Automation: Pandas, NumPy, scikit-learn, ETL, APIs, Workflow Automation, Azure Data Factory, Data Pipelines, SQL/Hive
AI & Tools: RAG, LLMs, Generative AI, Prompt Engineering, GitHub Copilot, ChatGPT, Claude, Git, GitHub, Jira, Confluence, Linux, Microsoft Office

EXPERIENCE

WNS Global Services *Jan 2025 – Present*
Data Analyst

- Automated recurring data extraction, transformation, validation, and reporting workflows, reducing manual effort and storage requirements by **over 80%**.
- Developed the Panther R Shiny application to replace an Excel-based reporting process, reducing manual effort by **over 60%** and improving reporting consistency and controlled workflow execution.
- Worked with large insurance-related datasets to perform data profiling, quality checks, reconciliation, standardization, and investigation of reporting discrepancies.
- Developed and optimized SQL queries using joins, window functions, filtering, and aggregations for analysis, reporting, reconciliation, and issue investigation.
- Built and improved Python and R data-processing workflows supporting repeatable extraction, transformation, validation, and analytical reporting.
- Investigated data and reporting issues by tracing discrepancies across inputs and transformations, supporting root-cause identification, impact assessment, and resolution.
- Worked with business and technical teams on requirements, UAT, defect investigation, testing, documentation, and iterative delivery using Agile practices, Jira, Git/GitHub, and Confluence.
- Received the **WOW Award** for independently driving key deliverables for the Panther project.

Easyrewardz Software Services *Oct 2024 – Dec 2024*
Data Science Trainee

- Developed Python workflows for data extraction, cleaning, transformation, API processing, validation, and analytical reporting.
- Performed exploratory data analysis and reconciliation to identify inconsistent and anomalous records and derive insights from structured datasets.

PROJECTS

Customer Segmentation & Engagement Analytics *Python, SQL, Power BI*

- Analyzed customer behavior and engagement data to identify usage patterns, customer segments, and opportunities for targeted engagement.
- Built analytical dashboards to track segment-level trends, engagement metrics, and performance drivers and support data-driven recommendations.

Document Intelligence using RAG *Python, RAG, LLMs*

- Built a document question-answering workflow that processes PDF documents, divides content into meaningful chunks, retrieves relevant information, and generates context-based answers using an LLM.
- Experimented with retrieval and prompt strategies and evaluated response quality to improve relevance and reduce unsupported answers.

Transaction Monitoring & Risk Analytics *Python, SQL, scikit-learn*

- Developed an analytical solution to identify unusual transaction patterns using feature engineering, anomaly detection, classification, and risk scoring techniques.
- Evaluated model results using precision, recall, confusion matrices, threshold analysis, and false-positive review to understand model effectiveness.

EDUCATION

Bachelor of Technology in Computer Science Engineering *2024*
Chaudhary Charan Singh University CGPA: 8.3
